The study, first published in 1981, traces the history and development of Japanese business from the seventeenth century, and is the only text that systematically treats the rise of Japanese business in its full complexity and against the background of contemporary social and political conditions. Each section discusses the socio-economic conditions, the leadership and business elites, the internal and external structures and the impact of values. The emergence of new types of businessmen, their ideas and approaches, their relations to the government, their handling of labour problems are all analysed. One of the most intriguing aspects of this study is the unique importance of Japanese values, their tenacious persistence and uncanny flexibility and resilience. The strengths and weaknesses of these values are examined in detail.

Critical realism has become increasingly important in the way organization and management is studied. This innovative book argues for an alternative to the prevailing ontology, and shows how positivism and its empirical realist ontology can be abandoned without having to accept strong social constructionism. Critical Realist Applications in Organisation and Management Studies applies critical realism in four ways. First, in the removal of meta-theoretical obstacles that hinder the development of fruitful theoretical and empirical work. Second and third, as a meta-theoretical tool with which to develop appropriate methodological and theoretical frameworks which can then be used to inform appropriate empirical work, and finally, all of this is applied across a broad range of subject areas including critical management studies, accountancy, marketing, health care management, operations research, the nature of work, human resource management, labour process theory, regional analysis, and work and labour market studies. Ideal for postgraduates and professionals, this key book will be a valuable resource across a wide range of subjects.

### **Introduction to Business** Springer

This book examines the relationship between digital innovations on the one hand, and accounting and management information systems on the other. In particular it addresses topics including cloud computing, data mining, XBRL, and digital platforms. It presents an analysis of how new technologies can reshape accounting and management information systems, enhancing their information potentialities and their ability to support decision-making processes, as well as several studies that reveal how managerial information needs can affect and reshape the adoption of digital technologies. Focusing on the four major aspects data management, information system architecture, external and internal reporting, the book offers a valuable resource for CIOs, CFOs and more generally for business managers, as well as for researchers and scholars. It is mainly based on a selection of the best papers - original double blind reviewed contributions - presented at the 2015 Annual Conference of the Italian Chapter of the Association for Information Systems (AIS).

In this well informed, insightful and comprehensive study, Mario Fernando critically explores the complex and multiform interplay of management theory and practice, personal biographies, theologies of faith and cultural dynamics in order to elaborate and advance a coherent theory of spiritual leadership. George Gotsis and Zoe Kortezi, Entrepreneurship and Innovation In this example of science and theory meeting emerging reality, Mario Fernando delves into the complex dimensions of the interplay of the science of management, theologies of faith, and the dynamics of culture to first understand and then construct and advance a theory of spiritual leadership. With real world insights and reflections from himself and others, he addresses theory to practice implications and cautions against creating just another fad. This insightful and thought-provoking book provides a timely read and focus for reflection for organizational leaders concerned with success in the new age economy and global society, and who seek a path to understand their own personal and pragmatic spiritual leadership grounding. Gary D. Geroy, Colorado State University, US The book will be an important contribution to the literature and will certainly open up some new avenues of research and inquiry. Ralph L. Piedmont, Loyola College in Maryland, US Although interest in workplace spirituality continues to soar, the literature and empirical research on non-Western, non-Christian spirituality in entrepreneurship and leadership is almost non-existent. Mario Fernando s unique study fills the gap in the literature, exploring cross-cultural and religious distinctions of the contemporary meaning and enactment of spirituality in organizations. Case studies of thirteen influential, spiritually motivated Buddhist, Hindu, Christian and Muslim entrepreneurs are used to explore the significant impact of religion upon the management and leadership of an organization. The book concludes that although each entrepreneur s outward practice of spiritual leadership conformed to personal religious beliefs, these practices had two common aims: a connection with self, others and/or an ultimate reality, and a need to direct and motivate self and/or others to develop an organizational culture founded on a sense of shared community. This unique and fascinating work will strongly appeal to entrepreneurship, leadership and business and management researchers and scholars with a particular interest in the interplay between entrepreneurship and spiritual leadership.

*Professional Ethics and Human Values* Juta and Company Ltd

Is profit-making the only goal of a business? Should an unbridled market mechanism drive corporate enterprise? To what extent should corporations compensate for the manifest and hidden costs that are incurred by the society at large? These are some of the questions that have engaged specialist economists, business barons, corporate heads and management experts for decades. A consensus has emerged that corporate practices cannot bypass the fundamental demands of ethical behaviour, that administration and policies of governance have to be more transparent and publicly accountable, and that businesses must be sensitive to the community and environment within which they are established. This has led to the emergence of three key concepts of contemporary businesses, namely, business or corporate ethics, corporate governance, and corporate social responsibility.
