Loose-leaf Fundamentals of Corporate Finance Alternate Edition McGraw-Hill Higher Education
 This course of lectures introduces students to elementary concepts of corporate finance using a more systematic approach than is generally found in other textbooks. Axioms are first

highlighted and the implications of these important concepts are studied afterwards. These implications are used to answer questions about corporate finance, including issues related to derivatives pricing, state-price probabilities, dynamic hedging, dividends, capital structure decisions, and risk and incentive management. Numerical examples are provided, and the mathematics is kept simple throughout. In this second edition, explanations have been improved, based on the authors' experience teaching the material, especially concerning the scope of state-price probabilities in Chapter 12. There is also a new Chapter 22: Fourteen Insights.

This is an excerpt from the 4-volume dictionary of economics, a reference book which aims to define the subject of economics

today. 1300 subject entries in the complete work cover the broad themes of economic theory. This extract concentrates on finance. *Empirical Corporate Finance* Random House Trade Paperbacks Neoclassical Finance provides a concise and powerful account of the underlying principles of modern finance, drawing on a generation of theoretical and empirical advances in the field. Stephen Ross developed the no arbitrage principle, tying asset pricing to the simple proposition that there are no free lunches in financial markets, and jointly with John Cox he developed the related concept of risk-neutral pricing. In this book Ross makes a strong case that these concepts are the fundamental pillars of modern finance and, in particular, of market efficiency. In an efficient market prices reflect the information possessed by the market and, as a consequence, trading schemes using commonly available information to beat the market are doomed to fail. By stark contrast, the currently popular stance offered by behavioral finance, fueled by a number of apparent anomalies in the financial markets, regards market prices as subject to the psychological whims of investors. But without any appeal to psychology, Ross shows that neoclassical theory provides a simple and rich explanation that resolves many of the anomalies on which behavioral finance has been fixated. Based on the inaugural Princeton Lectures in Finance, sponsored by the Bendheim Center for Finance of Princeton University, this elegant book represents a major contribution to the ongoing debate on market efficiency, and serves as a useful primer on the fundamentals of finance for both scholars and practitioners.

Corporate Finance Macmillan International Higher Education Stephen F. Ross presents this succinct introduction to key topics of law specific to sports, comparing approaches to sports law across the globe, with particular focus on the United States, Europe, and common law jurisdictions. Contrasting the profit-maximizing approach of North American leagues with the global integrated approach of professional sports governed by national and international governing boards, the book offers a novel model for the latter.

Corporate Finance, by Ross, Westerfield, and Jaffe is a popular textbook that emphasizes the modern fundamentals of the theory of finance, while providing contemporary examples to make the theory come to life. The authors aim to present corporate finance as the working of a small number of integrated and powerful intuitions, rather than a collection of unrelated topics. They develop the central concepts of modern finance: arbitrage, net

present value, efficient markets, agency theory, options, and the trade-off between risk and return, and use them to explain corporate finance with a balance of theory and application. The well-respected author team is known for their clear, accessible presentation of material that makes this text an excellent teaching tool. Brad Jordan, known for his successful work on the RWJ Fundamentals and Essentials books, contributed to this edition. His influence will be seen particularly in the writing style with smoother coverage of topics, and the increased quality in the problem material.

Understanding Alternative Investments McGraw-Hill College Providing students with additional problems for practice, this work contains chapters beginning with Concepts for Review, followed by Chapter Highlights. It provides a short Concept Test, averaging 10 questions and answers. It also includes a Student Problem Manual with the answers to these problems.

"There are moments in the history of theatre when stagecraft takes a new turn. I like to think that this happened for the American musical last week, when Tony Kushner's *Caroline, or Change* (at the Public), a collaboration with composer Jeanine Tesori and the director George C. Wolfe, bushwhacked a path beyond the narrative end of the deconstructed, overfreighted musicals of the past thirty years."—John Lahr, *The New Yorker* Louisiana, 1963: A nation reeling from the burgeoning Civil Rights Movement and the Kennedy assassination. Caroline, a black maid, and Noah, the son of the Jewish family she works for, struggle to find an identity for their friendship. Through their intimate story, this beautiful new musical portrays the changing rhythms of a nation. Tony Kushner and composer Jeanine Tesori have created a story that addresses contemporary questions of culture, community, race and class through the lens and musical pulse of the 1960s. Tony Kushner is best known for the two-part masterwork, *Angels in America*, recently produced by HBO as a six-hour television event, directed by Mike Nichols to universal acclaim. His other plays include *Homebody/Kabul*, *A Bright Room Called Day* and *Slavs!*; as well as adaptations of Corneille's *The Illusion*, Ansky's *The Dybbuk*, Brecht's *The Good Person of Szechuan* and Goethe's *Stella*. Current projects include: *Henry Box Brown* or *The Mirror of Slavery* and *St. Cecilia* or *The Power of Music*. He recently collaborated with Maurice Sendak on an American version of the children's opera, *Brundibar*. He grew up in Lake Charles, Louisiana, and he lives in New York. Jeanine Tesori wrote the score for *Thoroughly Modern Millie*, which won the 2002 Tony and Drama Desk Awards for Best Musical and the multiple-award-winning *Violet*.

Lectures on Corporate Finance McGraw-Hill Education *Corporate Finance: Core* was developed for the graduate (MBA) level as a concise, up-to-date, and to-the-point product, the majority of which can be realistically covered in a single term or course. To achieve the objective of reaching out to the many different types of students and the varying course settings, corporate finance is distilled down to its core, while maintaining a decidedly modern approach. Purely theoretical issues are downplayed, and the use of extensive and elaborate calculations is minimized to illustrate points that are either intuitively obvious or of limited practical use. The goal was to focus on what students really need to carry away from a principles course. A balance is struck by introducing and covering the essentials, while leaving more specialized topics to follow-up courses. Net present value is treated as the underlying and unifying concept in corporate finance. Every subject covered is firmly rooted in valuation, and care is taken throughout to explain how particular decisions have valuation effects. Also, the role of the financial

manager as decision maker is emphasized, and the need for managerial input and judgment is stressed.

NEW YORK TIMES BESTSELLER • From the author of *American Wife* and *Eligible* . . . He proposed. She said no. And it changed her life forever. “A deviously clever what if.”—*O: The Oprah Magazine* “Immersive, escapist.”—*Good Morning America* “Ingenious.”—*The New York Times* NAMED ONE OF THE BEST BOOKS OF THE YEAR BY *The New Yorker* • *NPR* • *The Washington Post* • *Marie Claire* • *Cosmopolitan (UK)* • *Town & Country* • *New York Post* In 1971, Hillary Rodham is a young woman full of promise: *Life* magazine has covered her Wellesley commencement speech, she’s attending Yale Law School, and she’s on the forefront of student activism and the women’s rights movement. And then she meets Bill Clinton. A handsome, charismatic southerner and fellow law student, Bill is already planning his political career. In each other, the two find a profound intellectual, emotional, and physical connection that neither has previously experienced. In the real world, Hillary followed Bill back to Arkansas, and he proposed several times; although she said no more than once, as we all know, she eventually accepted and became Hillary Clinton. But in Curtis Sittenfeld’s powerfully imagined tour-de-force of fiction, Hillary takes a different road. Feeling doubt about the prospective marriage, she endures their devastating breakup and leaves Arkansas. Over the next four decades, she blazes her own trail—one that unfolds in public as well as in private, that involves crossing paths again (and again) with Bill Clinton, that raises questions about the tradeoffs all of us must make in building a life. Brilliantly weaving a riveting fictional tale into actual historical events, Curtis Sittenfeld delivers an uncannily astute and witty story for our times. In exploring the loneliness, moral ambivalence, and iron determination that characterize the quest for political power, as well as both the exhilaration and painful compromises demanded of female ambition in a world still run mostly by men, *Rodham* is a singular and unforgettable novel.

Judging by the sheer number of papers reviewed in this Handbook, the empirical analysis of firms’ financing and investment decisions—empirical corporate finance—has become a dominant field in financial economics. The growing interest in everything “corporate is fueled by a healthy combination of fundamental theoretical developments and recent widespread access to large transactional data bases. A less scientific—but nevertheless important—source of inspiration is a growing awareness of the important social implications of corporate behavior and governance. This Handbook takes stock of the main empirical findings to date across an unprecedented spectrum of corporate finance issues, ranging from econometric methodology, to raising capital and capital structure choice, and to managerial incentives and corporate investment behavior. The surveys are written by leading empirical researchers that remain active in their respective areas of interest. With few exceptions, the writing style makes the chapters accessible to industry practitioners. For doctoral students and seasoned academics, the surveys offer dense roadmaps into the empirical research landscape and provide suggestions for future work. *The Handbooks in Finance series offers a broad group of outstanding volumes in various areas of finance *Each individual volume in the series should present an accurate self-contained survey of a sub-field of finance *The series is international in scope with contributions from field leaders the world over

Fundamentals of Corporate Finance was designed and developed for a first course in business or corporate finance, for both finance majors and non-majors alike. The text is nearly self-contained in terms of background or prerequisites, assuming some familiarity with basic algebra and accounting concepts, while still reviewing important accounting principles very early on. The organization of this text has been developed to give

instructors the flexibility they need. The best-selling text has three basic themes that are the central focus of the book: 1) An emphasis on intuition: the authors separate and explain the principles at work on a common sense, intuitive level before launching into any specifics. 2) A unified valuation approach: net

present value (NPV) is treated as the basic concept underlying corporate finance. 3) A managerial focus: the authors emphasize the role of the financial manager as a decision maker, and they stress the need for managerial input and judgment.
